

California the presence of eight Delhi Sands Flower Loving Flies added over \$3.5 million to the cost of building a public hospital—that is over \$441,243 per fly. The Fish and Wildlife Service made the project planners move the hospital after it was already planned for construction to save fly “habitat.”

Let me give you an example from my own district in Washington County, Utah where we have been forced to develop a Habitat Conservation Plan for the Desert Tortoise which happens to reside in one of the fastest growing areas of the nation. The County, the City of St. George and the private landowners have responsibly participated in this process but at an incredible cost. For example, within Washington County Utah we spend \$3,554.00 dollars per student in the public school system and this County has a great school system with all of the modern necessities. However, when it comes to the desert tortoise we spend a lot more. There are approximately 7,000 to 8,000 tortoises within the preserve. We are going to spend in excess of \$250 million on these tortoises. That is over \$33,000 per tortoise! Is it not incredible that we are spending almost ten times the amount of public funds on a tortoise than what we are spending on the education of our children! If the American public understood that tortoises, flies and beetles were more important to this Administration than our children, there would be even more outcry for reform.

The Administration likes to brag about the over 200 habitat conservation plans that they have negotiated. Again, almost all of these are in the west. These HCP's as they are called can be very expensive to prepare, with private landowners bearing the cost of paying for their development and implementation. Some of these cost over a million dollars just to propose because the private landowner must pay biologist to conduct surveys and develop plans to avoid the take of the species on the property.

How much is the ESA costing? The real cost is incalculable. The cost includes lost jobs to loggers in the Pacific Northwest and in the southwest where the logging industry and its taxes have been totally destroyed. It includes ranchers and farmers in the southwest who are having to cut back their herds because of an avalanche of lawsuits filed by radical groups with nothing better to do than file lawsuits against the people who are the back bones of these communities. It includes farmers who don't have enough water for their crops. It includes over a billion dollars spent on salmon with nothing to show for it according to the General Accounting office.

Should we be concerned about these costs? You bet we should be concerned. We all pay these costs in one way or another and yet all this money has resulted in almost no recoveries of endangered species because of actions taken under the ESA. The bald eagle and peregrine falcon did not recover because of ESA. They recovered because of the actions of a few dedicated ornithologists who were able to breed them in captivity and return them to the wild after we removed DDT from our environment. That was not done because of ESA.

ESA has been a dismal, costly failure. We need a new approach that works, but doesn't drain our American economy and create impoverished rural communities throughout the west.

FIBROMYALGIA, IT IS A DISABLING CONDITION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. FILNER) is recognized for 5 minutes.

Mr. FILNER. Mr. Speaker, I rise this evening in honor of National Fibromyalgia Awareness Day and the suffering that those with this disorder endure. In honor of this day, I just introduced the Access to Disability Insurance Act with the hopes of ending the suffering that those with this disorder experience at the hands of insurance companies.

It is estimated that 6 to 12 million people suffer from fibromyalgia. 75 percent of those with this disease are women. The illness affects people between the ages of 20 to 60, often striking people in their 20s and 30s.

Although nearly all of those with the disorder suffer from both muscular pain and fatigue, the vast majority also experience insomnia, joint pain and headaches. For many, the suffering they experience with fibromyalgia is just the beginning. When they try to collect on their private disability insurance because their symptoms are debilitating and prevent them from working, they are denied by their insurance company. To add insult to injury, they are then denied the ability by law to appeal their denial.

This denial is easy and is commonplace by insurance companies because of the way that the Employee Retirement Income Security Act is written. This act, known as ERISA, prevents an individual from appealing an insurance company's denial of a claim unless the person can prove that the insurance company, and I quote, abused its discretion.

That is difficult to do because insurance companies have often stated that physician diagnoses of fibromyalgia are, in their words, subjective because the doctor had to rule out a number of disorders in order to arrive at this fibromyalgia diagnosis.

My bill, the Access to Disability Insurance Act, would allow appeals of insurance company decisions without having to demonstrate the hard to prove standard of abuse of discretion.

Picture this: You and your employer have paid into disability insurance for years, hoping that you will never have to use it. Then you do get sick and fight to get well, but are unable, constantly dealing with uncontrollable pain and fatigue. Then you have to stop working. All the while, your physician is struggling to determine what has gotten you sick. In many cases, it takes 5 years, 5 years, for accurate diagnoses. After all of this, your disability insurance company denies your claim.

Under current law, there is no recourse, no ability to appeal that denial.

Why should a doctor's painstaking diagnosis be brushed off by an insurance company claims administrator? Because, I believe that patients have a

right to appeal that decision, the same right they would have if they applied for governmental Social Security disability benefits, I am introducing this legislation tonight.

This is not an isolated problem. Approximately 30 to 40 percent of fibromyalgia patients have paid into long-term disability plans while they were working, hoping as we all do that we will never need to use this insurance.

It is bad enough that people have to suffer from this illness. They should not have to suffer through a disability process that closes the door on them before even hearing an appeal.

I urge all of my colleagues to join me in cosponsoring the Access to Disability Insurance Act and to celebrate National Fibromyalgia Awareness Day.

ENSURING PROPER COMPENSATION FOR THE NUCLEAR CLAIMS, RELOCATION AND RESETTLEMENT COSTS OF THE PEOPLE OF THE REPUBLIC OF THE MARSHALL ISLANDS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from American Samoa (Mr. FALEOMAVAEGA) is recognized for 5 minutes.

Mr. FALEOMAVAEGA. Mr. Speaker, yesterday, the House Committee on Resources held a hearing on a subject that I feel is critically important, and I wanted to take this opportunity to share it with our colleagues and to our Nation.

Mr. Speaker, I deeply commend the gentleman from Alaska (Mr. YOUNG), the House Committee on Resources chairman, and the gentleman from California (Mr. GEORGE MILLER), the committee's ranking Democrat for convening a hearing to review the long-term effects of America's nuclear testing program on our close friends and long time allies, the good people of the Republic of the Marshall Islands.

Mr. Speaker, our great Nation owes an immense debt to the Marshallese people for their tremendous sacrifices that directly contributed to and continues to contribute to our Nation's nuclear deterrent and ballistic missile defense capability.

Mr. Speaker, the United States in the 1950s detonated 67 nuclear bombs in the homeland of the Marshallese people, directly facilitating development of America's nuclear arsenal while poisoning the environment and the people in the Marshall Islands.

Today the Marshallese people continue to contribute to America's security by providing U.S. testing facilities at Kwajalein Atoll. This atoll, Mr. Speaker, happens to be the largest atoll in the world, for development of our Nation's ballistic missile defense against rogue states possessing weapons of mass destruction.

I want to share a little bit of data with my colleagues, Mr. Speaker. The total amount of TNT that was exploded
